NOTE TO USERS

This edition of *Northern Indicators* can only be found as an electronic copy online. It is available through INAC's internet website, at www.inac-ainc.gc.ca, under Publication and Research; and under Statistical Publications.

MAIN DATA SOURCES

This report is the 32nd issue in a series of reports which present a profile of the social, economic, and public finance characteristics of Yukon, Northwest territories and, where possible, Nunavut. **The primary data source for this publication is the Canadian Socio-Economic Information Management System (CANSIM 2).** Maintained by Statistics Canada, the CANSIM 2 database contains information on measures of Canada's population, economy, and industry. This issue incorporates all new data revisions available as of June 2003. This on-line document will be updated regularly to reflect Statistics Canada's CANSIM 2 updates. Please note that Nunavut, Canada's newest territory, came into being on April 1, 1999. Data shown for Nunavut prior to April 1, 1999 has been derived.

Statistics Canada data collection methodologies can change, therefore readers should note that data series in this edition may not be comparable to previous editions of *Northern Indicators*. **Readers are therefore encouraged to consult all footnotes or the original source to determine what data have been used to produce the tables and charts, noting that source data may have been updated since, or sources altogether changed from previous editions of *Northern Indicators*.**

Statistics Canada, CANSIM 2, Table 106-9001

EDUCATION AND SOCIAL INDICES

Table 2.7 SUICIDES AND SELF-INFLICTED INJURIES, BY CANADA, YUKON, NWT, AND NUNAVUT, 1997

	CANADA	YUKON	NWT	NUNAVUT
Number of deaths	3772	5	6	22
Mortality rate per 100,000 population	12.6	16.5	15.2	86.1

NOTES:

- Counts in this table are based on three consecutive years of death data, summed and divided by three. Rates are based on these counts divided by the population estimate of the middle year. The reference period associated with these data reflects the mid-point of the three-year period.
- Rates are age-standardized using the direct method, and the 1991 Canadian Census population structure. All rates are per 100,000 population. The use of a standard population results in more meaningful mortality rate comparisons because it adjusts for variations in population age distributions over time and across geographic areas.

NOTES:

* Estimates of numbers of employees in firms of all sizes (see additional notes below).

** Recipients of Employment Insurance (EI) Regular Benefit.

1. Source data for employees is not seasonally adjusted. Source data for EI is not seasonally adjusted.

2. Statistics on numbers of employees are delivered from a monthly sample survey of firms, institutions and organizations of all sizes for all provinces and territories and cover all industries except agriculture, fishing, trapping, private households, religious organizations and the military.

NOTES:

1. NWT includes Nunavut prior to 2001
2. Statistics are derived from a monthly sample survey of firms, institutions and organizations of all sizes for all provinces and territories and covers all industries except agriculture, fishing, trapping, private households, religious organizations and the military. Includes earnings from overtime. Data are not seasonally adjusted.
3. Calculated from monthly data

Capital Consumption Allowances**	162	168	185	202	209	206	210	212	218	224

NOTES:

1. Labour income includes salaries, wages, and supplementary labour income.

* The definition of GDP at basic cost can be found at Statistics Canada's website at the following link

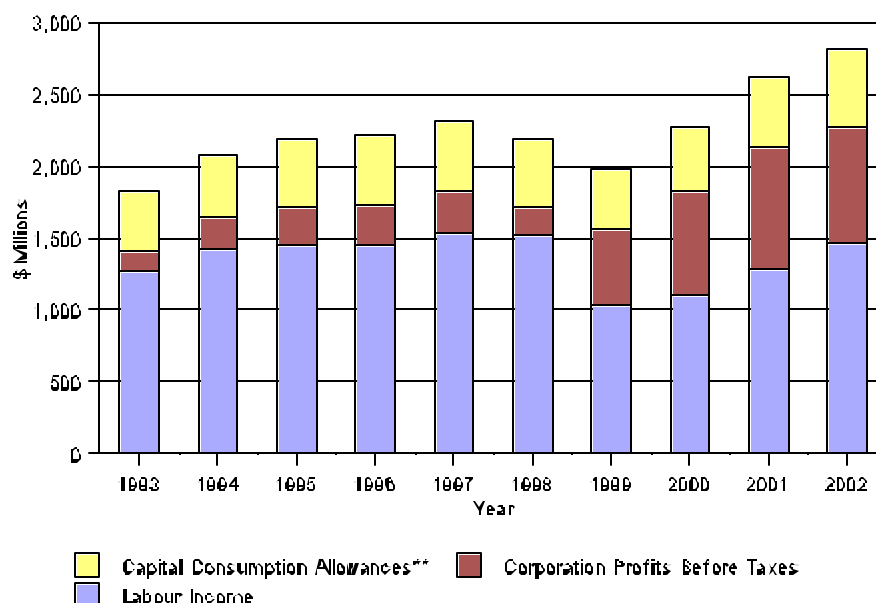

<http://www.statcan.ca/english/concepts/SNA/valuation.htm>

** The Capital Consumption Allowance is an estimate of the amount of capital (equipment, buildings, etc.) that was used in the production process by producers of goods and services. It is included as part of the income-based calculation of GDP in order to balance the expenditure calculation where such costs are embedded in the market prices paid to purchase goods and services.

NOTES:

1. Quarterly statistics shown here are calculated from monthly data.
2. Monthly sales statistics are collected through the Retail Trade Survey, which collects retail sales, receipts and number of retail locations by geographic region from retail enterprises that are considered large multi (4 locations or more and 5 million per year within a trade group) and other retail establishments. It excludes vending machine operators and direct sellers.

NOTES:

1. The Consumer Price Index (CPI) measures rates of change of consumer prices over time, within specific urban centers or Canada as a whole.

The CPI does not measure price differences between the centers at specific points in time.

2. Annual averages above are calculated from quarterly data (See Table 6.2)

NOTE:

The Consumer Price (CPI) measures rates of change of consumer prices over time, within specific urban centers or Canada as a whole. The CPI does not measure price differences between the centers at specific points in time.

GLOSSARY

CAPITAL CONSUMPTION ALLOWANCE - allowance for the cost of using up capital in the production process.

CAPITAL EXPENDITURE - expenditures including the cost of procuring, constructing, and installing new durable plant and machinery and equipment.

CONSTANT PRICES - a price value expressed as the price prevailing during a reference period. In this publication, constant prices refer to values indexed against the Consumer Price Index (CPI), or Implicit Price Index (IPI) during the 1997 reference year.

CONSUMER PRICE INDEX (CPI) - an indicator of price movements in consumer prices paid by target populations. The cost of a fixed basket of commodities is expressed relative to a reference period. As of this publication, the reference year for the CPI, as published by Statistics Canada, is 1992. CPIs are published for Canada, the provinces, Whitehorse, and Yellowknife.

CURRENT PRICES - prices expressed at the prices prevailing during the year indicated. All prices and expenditures in this publication are expressed in current prices unless otherwise indicated.

FACTOR COST - value remaining after applicable taxes and subsidies are deducted from market prices, reflecting the costs of labour and capital (i.e. production factors).

GROSS DOMESTIC PRODUCT (GDP) - the total unduplicated value of goods and services produced in the economic territory of a given country or region during a given period. GDP can be valued at factor cost or at market prices.

IMPLICIT PRICE INDEX (IPI) - n.b. in this publication, IPI used is the IPI, final domestic demand (FDDIPI): an indicator of the price movement in consumption throughout all sectors of the economy, including consumers, government industries, and private industries. As of this publication, the reference year for the IPI, as published by Statistics Canada, is 1997.

PARTICIPATION RATE - according to the national criteria used in Statistics Canada's Labour Force Survey, the **participation rate** is the percentage of the total population ages 15 years and over, who are part of the labour force (i.e. unemployed or employed).

REPAIR AND MAINTENANCE EXPENDITURE - expenditures not considered capital; expenditures charged against revenue in the year incurred and made in order to maintain fixed assets or productive capacity in good working conditions.

UNEMPLOYMENT(national criteria) - persons who, during the reference week of the survey, were available for work but were on temporary layoff, or had looked for work in the past four weeks, or had a job to start within the next four weeks. The **unemployment rate** is the percentage of the total persons in the labour force who are unemployed.
