Vessels	Page
Table 1 Active vessels in the Scottish fishing fleet, number, total tonnage and total power by overall length, 31 December 1986 to 1996	1
Table 2 Active vessels in the Scottish fishing fleet, number, total tonnage and total power by age, 31 December 1996	1
Table 3 Active vessels in the Scottish fishing fleet, number, total tonnage and total power by overall length, 31 December 1996	2
Table 4 Active vessels in the Scottish fishing fleet by main fishing method, 31 December 1986 to 1996	3
Table 5 Active vessels in the Scottish fishing fleet by main fishing method and length, 31 December 1996	3
Table 6 Active vessels in the Scottish fishing fleet by base district, 31 December 1996	3
Landings	
Table 7 Liveweight and value of landings, by species type, 1992 to 1996	4
Table 8 Liveweight and value of major species landed into the UK by country of landing, 1992 to 1996	5
Table 9 Total allowable catches, UK quotas, and liveweight landed by UK vessels, 1992 to 1996	6-9
Table 10 Standard weight and value of landings into Scotland by UK vessels, by species, 1989 to 1996	10
Table 11 Average value of landings into Scotland by UK vessels, by species, 1989 to 1996	11
Table 12 Standard weight and value of landings into Scotland by UK vessels, by district and species, 1996	12-14
Table 13 Standard weight and value of landings into Scottish ports by UK vessels, by district and species type, 1994 to 1996	15
Table 14 Standard weight and value of landings into Scotland by UK vessels, by main species and month, 1992 to 1996	16
Table 15 Price per tonne of landings into Scotland by UK vessels, by main species and month, 1992 to 1996	17
Table 16 Value of landings into Scotland by UK vessels, by main fishing method and month, 1996	17
Table 17 Standard weight and value of landings from specified ICES area into Scotland by UK vessels, by species, 1996	18-19
Table 18 Standard weight and value of landings abroad by Scottish vessels, by species, 1992 to 1996	20
Table 19 Standard weight and value of landings abroad by Scottish vessels, by country of landing, 1992 to 1996	20
Table 20 Standard weight and value of landings into Scotland by vessels based in Scotland, by base district and landing district, 1996	21
Table 21 Standard weight and value of landings by Scottish vessels into the main ports of England, Wales and Northern Ireland, 1996	22
Table 22 Standard weight and value of landings by Scottish vessels into England, Wales and Northern Ireland, by species, 1992 to 1996	22
Table 23 Standard weight and value of landings by UK vessels into the UK, 1992 to 1996	22
Table 24 Standard weight and value of landings into Scotland by UK vessels, by species group and vessel length, 1996	22
Table 25 Standard weight and value of landings into Scotland by UK vessels, by landing district, creek and species group, 1996	23-24
Table 26 Standard weight and value of landings into Scotland by foreign vessels, by species, 1992 to 1996	25
Table 27 Standard weight and value of landings into Scotland by foreign vessels, by nationality, 1992 to 1996	25
Table 28 Standard weight and value of landings into Scotland by foreign vessels, by ICES areas and species, 1996	26
Table 29 Number of arrivals, standard weight and value of landings into Scotland by foreign vessels, by nationality and landing district, 1996	27
Table 30 Standard weight and value of landings into Scotland, by vessel nationality and species type, 1992 to 1996	27
Table 31 Disposal of herring, mackerel and sprat landed into Scotland by UK vessels, 1992 to 1996	28
Table 32 Raw materials used in the production of fishery by-products, 1992 to 1996	28
Table 33 Standard weight and value of fishery by-products, 1992 to 1996	28
Table 34 Number of fishermen employed in Scotland, 1992 to 1996	28
Table 35 Number of fishermen employed by district and employment status, 1996	28

Annex B Notes

Annex C Sea fisheries districts and ICES areas

Note:

1. The landings data in tables 7,8 and 9 are expressed in liveweight; all others are in standard weight which, for demersal species (excluding Norway pout and sand eels) means gutted fish with head on. For other species it means whole fish.
2. The symbols used in the tables are : '‐' (less than half the final digit); '..' (not available); '‐' (nil). In some tables, the sum of the items may not equal totals because of rounding.
3. General enquiries about this publication and other data on sea fisheries statistics should be made to:

For third country waters, the total allowable catch is the amount available to the EC.

N/A indicates that a quota was not allocated to individual countries.

Table 32. Raw materials used in the production of fishery by-products, 1992 to 1996

	(thousand tonnes)				
	1992	1993	1994	1995	1996
Herring offal	8.4	8.5	4.3	20.7	48.8
Sprats	2.9	0.2	0.1	+	+
White fish offal	131.4	139.8	143.2	91.4	98.0
Horse mackerel	1.5	3.5	0.8	-	-
Mackerel offal	9.3	9.4	0.2	20.5	13.3
Sandeels	4.1	2.9	8.9	-	8.7
Capelin	9.3	4.7	0.8	-	0.9
Blue Whiting	16.7	22.3	22.3	-	16.4
Others	-	2.0	0.1	-	-
Total	183.9	193.3	189.1 (1)	196.2 (2)	186.1

(1) Includes 8.0 tonnes of herring/mackerel offal not attributed to either species

(2) Includes 63.5 tonnes not attributed to any species

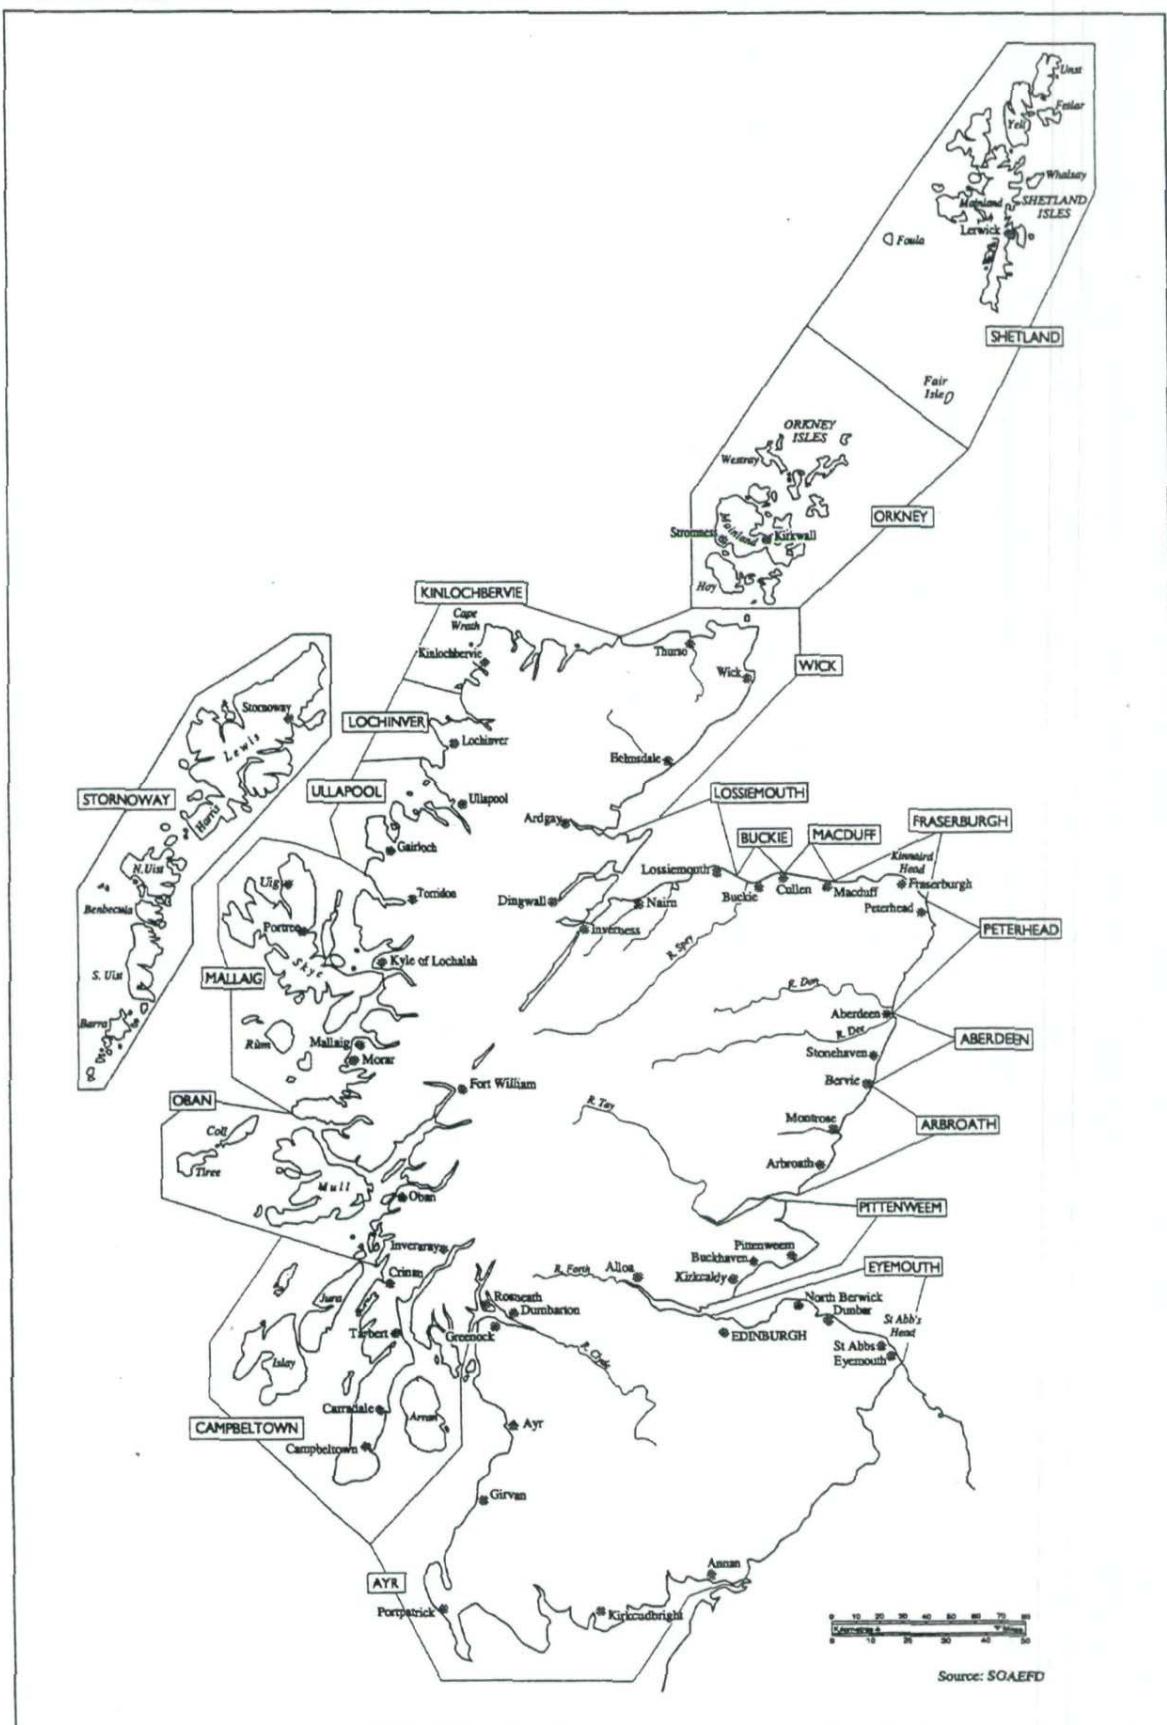

Annex B

Notes

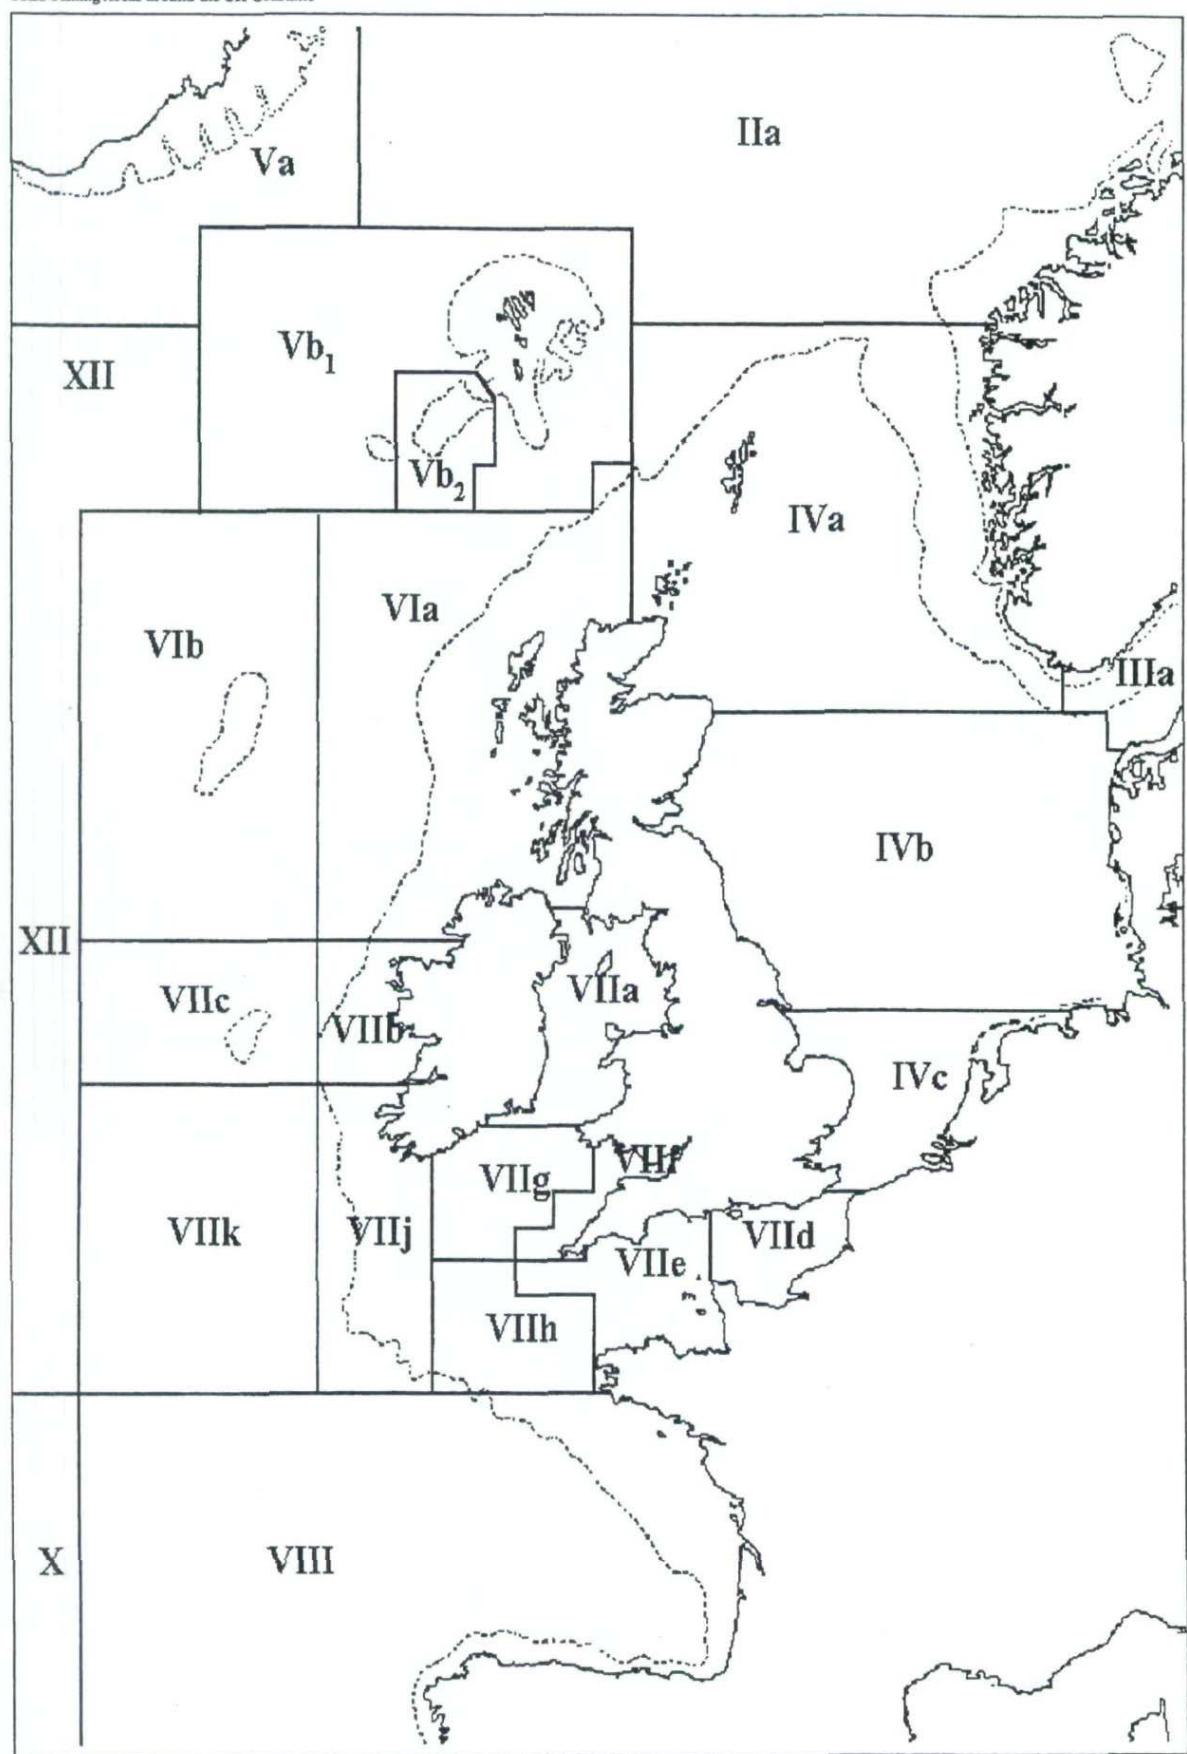

1. Base district/ creek	Defined as the geographical area in which most of the owners of a vessel live and which includes the fishery office responsible for the issue of licences for that vessel. A creek is a subdivision of a district
2. Fishing methods	<p>Demersal trawl The gear consists of a net in the shape of a funnel attached to the vessel by wire ropes or 'warps'. As the net is towed over the sea floor the mouth is kept open by a combination of boards, floats and weights. The tail end of the net where the fish are trapped is the 'cod end'. The length of the warp is normally about three and a half to four times the depth of the water and can be used in depths of 100 to 450 metres from the stern of the vessel. Other single-vessel trawling methods (Industrial, Queen Scallop, Shrimp, and Nephrop) follow the same principal. Nephrop trawl is used by 'inshore' vessels in the 10 to 25 metre length group, many of which are multi-purpose and may also use seine nets; if so rigged, a vessel can tow 2 or smaller type trawls (Nephrop twin/multiple trawls).</p> <p>Pair (two boat/mid-water) trawl Used to fish at depths between the surface and the sea floor. The net is towed by two vessels which may be up to 400 metres apart, the depth of the net being mainly controlled by the length of the warps and the vessels' speed. The method is used by vessels in the inshore fleet for catching both demersal and pelagic species.</p> <p>Pelagic trawl Also used at depths between surface and sea floor, but vessel's (or vessels') speed when towing nets is greater than demersal trawling.</p> <p>Seine nets Another bottom fishing method. The gear consists of a sac of netting with wings on either side kept in position vertically by floats and weights. Long warps are attached to the net, one of which is initially fastened to a flagpole passed through a buoy ('dahn buoy'). The vessel steams forward paying out warp, then the net itself, then more warp to form a triangle back to the dahn, which may be 1 to 3 km from the net. The vessel then steams ahead causing the warps to herd the fish into the path of the net which is then winched aboard.</p> <p>Purse seine This method involves complete encirclement of a shoal or an area known to contain fish. The net, which may be up to 1.2 km long and 240 metres deep, is shaped like a purse. One end is first attached to a buoy, and the vessel then steams round the shoal paying out the net as it goes. On return to the buoy, the net is closed at the foot or 'purse'. It is then winched to the side of the vessel and the fish taken on board by means of a fish pump. This gear requires relatively heavy equipment and is not generally suitable for vessels below 20 metres. It is used to catch pelagic species (mainly herring, mackerel, sprats). Ring nets are similar except that the net is much smaller and operated by two vessels, although the use of ring nets is now uncommon.</p> <p>Beam trawl The beam trawl is a bottom fishing trawl net, used mainly for catching flatfish with the headrope attached to a beam towed along the bottom on runners at either end. The net is heavily weighted with a chain on the underside and has tickler chains running in front.</p> <p>Gill nets Sheets of netting, each about 35 metres long and totalling up to 1,500 metres or more, are paid out to form a curtain or barrier in the path of on-coming fish. The net is kept vertical by floats on the headrope and a heavy footrope, the fish being caught in the mesh by their gills. For white fish the nets are anchored near to the sea floor from which they are made to stand upright (by floats) like a fence.</p> <p>Great lines These are lines of thin rope totalling up to 15,000 metres long with hooks attached at intervals. The hooks are baited and the lines then laid along the sea floor, their position being marked by floats at each end. This method is particularly suitable for rocky and uneven grounds where other methods may be impractical. It is used by vessels in the 25 to 30 metre group, although few use the method now.</p> <p>Small lines Work on the same principle as Great Lines, but the vessels using the method are smaller and are usually at sea only one day at a time.</p> <p>Creels Are traps or pots used to catch shellfish, especially lobsters, nephrops and crabs. The pots are generally made from a combination of wood cane and netting. They are normally arranged on the sea floor in lots between 10 and 50, depending on the capacity of the vessel.</p> <p>Mechanical dredge Used to catch scallops, queen scallops and cockles. The gear consists of a steel framed mouth attached to a bag of light metal link chain. As the dredge is towed along the sea floor, metal teeth attached to the underside of the mouth rake the shellfish into the bag. The number of dredges on the vessel - which may be up to 20 metres - may vary depending on its power and size.</p> <p>Suction dredge Consists of a sledge dredge which is towed along the sea bottom and a suction pipe which transfers the cockles from the dredge to the vessel. Another method uses the suction pipe to blow sand clear of the shellfish, which are then gathered by hand by divers.</p>
